A Program of
Southeast Pediatric Environmental Health Specialty Unit at Emory University
Innovative Solutions for Disadvantage and Disability

The Southeast PEHSU and ISDD invite you to participate in our 2015-2016 Annual Break the Cycle program focusing on the environmental and social influences on children’s health, growth and development. Children who grow up in circumstances of social and economic disadvantage are at greater risk for exposure to adverse environmental factors and are more likely to suffer consequent adverse health and developmental outcomes. Break the Cycle supports a set of student driven research projects that creatively explore the environmental and social factors that adversely affect children’s health and well-being and develop creative ways to Break the Cycle.

Students are encouraged to work with their academic mentors to submit a proposal. Proposals will be reviewed and a limited number will be selected. Those selected will have the opportunity to work with the Break the Cycle team and with other students from around the country and internationally to see the project through and present their research at an annual conference scheduled for the spring of 2016. Students will also have their work published in an international peer-reviewed journal.

The expectation is that the project will commence at the time of selection and will be completed by the time of the conference in the spring of 2016. There will be monthly conference calls to review projects and provide perspectives and guidance. During these conference calls, faculty and students have an opportunity to communicate and collaborate with their counterparts in other disciplines at other universities.

Since the inception of the Break the Cycle program in 2005, we have partnered with over 30 different university departments in 9 States in the USA and internationally, and have supported research for over 90 students. We have had 7 monographs published in international journals and we are in the process of publishing the next monograph from the 10th annual conference held in April 2015. We completed a survey of past students in 2012 and found that the students rated their experience with Break the Cycle valuable and many continued to pursue career interests and direction related to their work on the Break the Cycle projects.
We invite students to submit a proposal abstract (form enclosed) by September 25, 2015. Proposals received will be reviewed by a Break the Cycle panel and decisions of the panel will be communicated to all applicants by October 15, 2015. We are looking forward to working with students and their mentors on the 11th annual Break the Cycle set of projects and making this cycle another great success.

Costs of travel and lodging for the student and faculty mentor to the annual conference will be supported by Break the Cycle.

If you have any further questions, feel free to contact me at lrubi01@emory.edu or our Project Coordinator, Laura Wells at laura.wells@emory.edu and we will be happy to discuss potential projects with you and your students.

Please see the enclosed guidelines for further information.

Best wishes for success.

Thanks.

Leslie Rubin

Research Associate Professor, Department of Pediatrics
Morehouse School of Medicine
Atlanta, GA
**Break the Cycle** is a collaborative interdisciplinary research and training program involving University faculty who mentor graduate and undergraduate students in academic tracks that focus on the impact of environmental factors on children’s health. The target populations are communities where the environmental hazards are related to circumstances of social and economic disadvantage. **Each student will be required to develop a project that focuses on reducing or preventing environmental health related illnesses and disorders for children who live in these communities.** At the end of the project period the students will present their studies and their findings in a symposium and will be required to write papers that will then be published in a journal. Our budget allows us to provide for travel and lodging for the annual conference and a modest stipend for the student on completion of the project.

**Environmental Health Disparities**
The diagram below represents how adverse social and economic factors may play out in the environment of a child and the impact that it has on health, development, education and future for the children in such communities. Substantial evidence, across a variety of academic and public policy areas, supports the relationships and patterns depicted in the diagram. This is the societal challenge of *Environmental Health Disparities*. There is no question of the need to interrupt and modify this set of relationships to change the course to create advantages for the children to break out of the cycle. In the big picture, the task is great and the cost is high. However, that does not mean that we cannot make a difference. We feel that any interruption is positive and can make a big difference for an individual, for a family or for a community – indeed, the expectation is that the student projects will have a ripple effect not only on the communities, but also on the careers of the students to prepare them to be better leaders and stewards of our collective future.
**Project Guidelines**

- University Faculty will identify students who have an interest in this topic area and encourage and support the student in the selection of an idea for research. We are specifically looking for projects that address **environmental factors that adversely affect the health of children living in circumstances of social and economic disadvantage**.
- During the project period there will be monthly conference calls to monitor the progress of the research projects, share ideas and assure that the project is consistent with the spirit of the *Break the Cycle* concept. **These conference calls are a requirement of students and their mentors.**
- At the end of the project period, the students will have an opportunity to present their projects at a conference in Atlanta which will be open to the public and includes a keynote speaker of national stature.
- The students are also expected to write papers on their projects which will be submitted for publication in an international journal as a monograph of the Break the Cycle projects. The papers will also be published as chapters in a book of student Break the Cycle projects.
- Students are requested to explore the future of their work on the specific projects.
- Funding of travel expense and accommodation will be provided for the student and faculty mentor.
- The progress and careers of the participating students will be tracked to evaluate the impact of their participation in the Break the Cycle Program on their academic or professional careers.

**The desired outcome:**

- To inspire students from a variety of academic disciplines to explore the relationship between adverse social, economic and environmental factors and the health and development of children and to creatively generate strategies to address the challenges,
- To collaborate with an interdisciplinary team of academic leaders from different universities and colleges to creatively examine the broader issues of this topic area,
- To promote leadership among the students, and
- To encourage faculty of our university partners to promote academic interest and social awareness in children’s environmental health particularly in *Children’s Environmental Health Disparities*. 
**Tentative Time Line of Activity: August 2015 through June 2016**

**2015**

August - September  
Announce Break the Cycle 11 to university faculty to invite students to submit proposals

September 25  
Deadline to submit abstract for consideration

October 15  
Announcement of acceptance of proposals

November 6  
First conference call will take place (8:00-9:30am)  
Review project topics & expectations of program  
Monthly conference calls will be scheduled

November 13  
Students finalize description of project

December 4  
Second conference call

**2015 - 2016**

Jan - Feb  
Required monthly conference calls with students and their mentors to review progress – exact dates TBA

March  
Students submit PowerPoint presentation for review – date TBA

April/May  
Conference held in Atlanta – date TBA

June 30  
Completion of 1st draft of papers for publication

July 31  
Completion of Project
We invite interested students to develop a creative project to *Break the Cycle* at any point, and thereby reduce the phenomenon of *Environmental Health Disparities* and promote optimal health and well-being for children and their families. This is the cycle diagram to guide the student in developing creative strategies.
